

Overview | Session Variables

Using Session Variables

```
def userLogin(request):
    data={}
    if request.method=="POST":
        username=request.POST['username']
        password=request.POST['password']
        user=authenticate(request,username=username, password=password)
        if user:
            login(request,user)
            request.session['username']=username
            return HttpResponseRedirect('/BRMapp/view-book/')
        else:
            data['error']="Username or password is incorrect"
            return render(request, 'BRMapp/user_login.html', data)
    else:
        return render(request, 'BRMapp/user_login.html', data)
```

Modify HTML and CSS

- In all html files of BRMapp but user_login and user_logout

```
<div id="nav">
    <a href="/BRMapp/view-book">View all </a>
    <a href="/BRMapp/new-book">Add New </a>
    <a href="/BRMapp/search-book">Search</a>
    <a href="/BRMapp/logout">Logout</a>
</div>
<div id="hello">Hello, {{ request.session.username }}</div>
```

- In BRMstyle.css

```
#nav{
    width:60%;
    margin:auto;
}
#hello{
    text-align:right;
    margin-right:50px;
    font-size:20px;
    color:white;
}
```
