Overview | Login Logout Overview

Overview

- User login is an essential activity in most of the web projects in order to keep track user specific information, server user specific content and security.

- Here we will learn about implementation of login logout in the application

- In this section of the course we are going to cover following:

    - We are going to add user authentication system in our previous app BRMapp.

    - Restricting user to access app pages without authentication

    - Using session variables

Steps

- Start Project

- Start app

- Create templates and static directory

- Configure paths and include app in settings.py

- Create HTML, models.py

- Register model to admin

- Create user through admin

- Create Views for login, logout

- Configure urls

- Run server

- Send Requests
